

## *Information and preparation on how to eliminate Cockroaches.*

Eliminating cockroaches will take time ( 30 days or less ) unlike over the counter products that have a contact kill last only a few minutes and do not continue to kill the rest of the family.

We will be using a safe, odorless, and effective insecticide that will last up to 3 months. If you have a heavy infestation we ask that you remove your dishes and utensil as we will pay special attention to these area. All rooms will be treated for this cleanout to be effective, so please make rooms accessible to the technician.

After treatment you will see roaches to die in about 3 days. This will continue when they all have come in contact with the insecticide by walking on it or by transferring it from another infected cockroach. This insecticide doesn't need to be ingested or does not dry up and turn black unlike Combat Gel.

Cockroaches may have left some of their eggs that will hatch in 2 weeks, but rest assure that our product is still working. Waiting for the baby Cockroach or Adult to walk through the treated area and die shortly.

Please **DO NOT** use any aerosols or any over the counter insecticide as this may damage our product and reduce its effectiveness

Thank you for your time and corporation

ASAP PEST CONTROL
